Nov. 5th & Nov. 12th, 2025, via Zoom

## Topics include:

**To Register: please click the link or scan the QR code on the bottom right side of the page**

### **Why Behavioral Health Integration (BHI)?**

Discuss the benefits of BHI for patients and providers, including addressing workforce shortages in BH care, offering comprehensive care in primary care, and mitigating provider burnout.

### **An Introduction to the PCP Role in BHI**

Examine the model of integrated care, including individual roles within the BHI team, bi-directional consultation, and the scope and lens of the team.

### **The Integration Model in Pediatric Primary Care**

Describe the roles of the integrated team in consultation to PCPs and families including providing enhanced support for screening and ensuring access to behavioral healthcare.

### **Screening for Social Emotional & Developmental Issues**

Explore the use of screeners in primary care, including broadband screeners, secondary screeners, and diagnostic tools for autism (ex: CARS2).

### **The Role of the PCP: Core Skills**

Build knowledge and skills for primary care providers, particularly in assessments of children with developmental concerns, school issues, and other behavioral health problems. Capacity building will involve assessment, diagnosis, and care for ADHD, depression, anxiety, and behaviors related to Autism Spectrum Disorder, including options for medication initiation for those common disorders.

### **Case Consultations & Discussions**

Apply skills to increase understanding and confidence in evaluation of pediatric developmental and behavioral health issues, including consulting with BHCs and family partners to support families as well as initiating behavioral health interventions including but not limited to, use of first-line psychotropic medications as appropriate.
